V-Drive

Big wave surfer, tow pioneer, and one of the founding fathers of SUP, Dave Kalama, partnered with Jim Terrell to create this groundbreaking design described by many to be a “game changer.” The V Drive features a distinctive scooped V Section on the back of the blade and a double dihedral for enhanced stability during the power application.

When using the V Drive, most users notice right away it’s distinctive catch. It’s very powerful in the front part of the stroke, which allows for quick acceleration and responsiveness, while retaining a very smooth exit and recovery. Used for catching waves, racing and touring, the V Drive can do it all. Weights range from 14-16oz with common blade angle of 10 degrees.

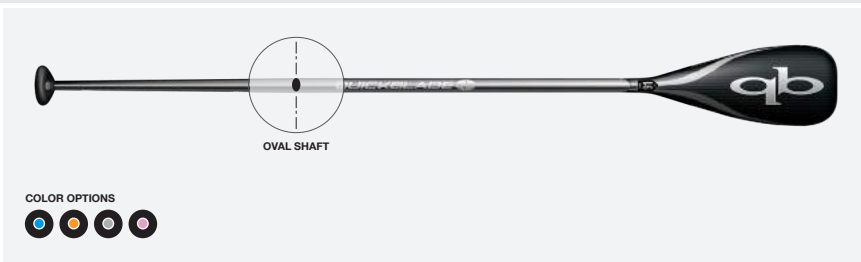

V-Drive Fixed Length

Blade Size:	71,81,91,101
Material:	All Carbon
Shaft:	All Carbon Round
Grip:	All Carbon Palm
\$499.00	MSRP

\$559.00 **MSRP**

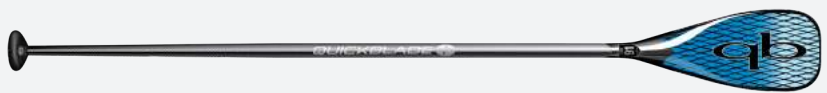

V-Drive

The colorful Vector-Net lay-ups have the perfect balance of stiffness and flex in this hybrid construction. With excellent torsional stiffness, they're ideal for both surfing, touring and racing, while more forgiving on the shoulders and wrists than the all carbon version.

V-Drive

Jim Terrell and Dave Kalama adapted the groundbreaking design of the successful V Drive All Carbon paddle into a fiberglass / carbon hybrid construction. The V Drive's distinctive double dihedral "V" pocket creates a very strong catch in the front part of the paddle stroke while retaining a very easy exit and recovery. In this new construction, the paddle has greater flex and is softer all around for those surfing, touring and racing. This new construction introduces our new RT85 round tapered shaft (smaller and softer than our standard round tapered shaft) with an SSI index of about 35 depending on length.

Trifecta

Travis Grant and Jim Terrell created the Trifecta paddle adding a double concave to the blade face and a pronounced dihedral. The result is a paddle that features very smooth entry and exit generating power in the mid-part of the stroke. This advanced design premiered at the 2013 Molokai 2 Oahu World Championships and immediately established itself as a success, as Travis won his first of what would become multiple Molokai Championships. The Trifecta is always at the top of podiums in races around the globe. The distinctive design is known for smoothness throughout the stroke, which adds stability while eliminating blade flutter. It is excellent for distance racing, downwinders, surfing, and touring.

Trifecta

The ultra-smooth entry and exit of this paddle come from its unique double concave on the blade's face and the pronounced dihedral. Originally designed by Molokai 2 Oahu Champion (2013, 2014) Travis Grant with Jim Terrell, the paddle has become a regular on podiums across the globe. Available in this hybrid carbon/fiberglass configuration featuring our RT85 round tapered shaft, it has more flex and is softer than its all-carbon counterpart. With its softer shaft (SSI 35) and blade, this is an excellent paddle for surfing, racing, downwind, or touring.

Kanaha

Even if you're not a pro, this paddle will make you feel like one. The Hybrid Carbon-Glass blade allows the four phases of the stroke come to life. The carbon glass shaft makes it ultra lightweight. The ergonomic, molded grip is more function than form, making it easy on the hands. The paddle features a 10 degree angled blade and weighs approximately 20 oz (depending on blade size and configuration)

Kanaha Fixed Length

Blade Size: 90
Material: Hybrid Composite
Shaft: Hybrid Carbon/Glass

Flyweight

Our Hybrid Carbon-Glass Flyweight paddle is designed specifically for lighter (under 150 pounds) paddlers seeking a high performance, entry-level paddle. Even if you are not an upcoming pro, this paddle will make you feel like one. The Flyweight blade features a slight dihedral on the face to reduce flutter and a curved tip for a fast, clean catch. Built to fit any paddlers' needs, the Flyweight all-fiberglass paddle is available in both fixed length and adjustable configurations.

Flyweight Fixed Length

Blade Size: 83

Mirofly

Our new Micro Fly Hybrid Carbon-Glass paddle is designed specifically for smaller paddlers of 110 lbs (50 kg) or less. Both the shaft and blade are made from high quality fiberglass. Of similar design and construction as the popular Kanaha and Flyweight models, it's scaled down to fit smaller hands. The ultra-light Microfly has a blade area of 66 sq. in.

Microfly Fixed Length

Blade Size: 66
Material: Hybrid Composite
Shaft: Hybrid Carbon/Glass

Swift Sweeper

Made with the entry level paddler who wants to test the waters first, the sweeper has an extremely tough fiberglass shaft and an invincible, reinforced plastic blade that's ideal for ease of stroke. The blade can also be appropriately sized for children or adults and anyone in between. Plus, it has all the same, thoughtful design that goes into each of our Kanaha paddles - from grip to paddle. So not only is it rugged, lightweight and easy to use, but its also lightweight and easy on your wallet.

Swift Sweeper Fixed Length

Blade Size: 90
Material: Glass Filled Nylon
Shaft: Round Fiberglass
Grip: Foam Wrapped

\$149.00 **MSRP**

Swift Sweeper Adjustable
